**天敵による捕食行動が
昆虫の繁殖力を増加させる**

~~貯蔵害虫~~

The image is a press release graphic for a research finding. It features a central white area with a border of colorful logos from various Japanese universities, including Tohoku University (東北大学), Keio University (慶応義塾大学), and others. The main text, in black and red, states that predation by natural enemies increases the reproductive power of insects. Below this, the term '貯蔵害虫' (Storage Pests) is crossed out with a red 'X'. An illustration shows a brown paper bag, a small white cube, and a white patch, likely representing a pest infestation or storage conditions.
